Dieser Forschungsbericht wurde mit modernsten Hochleistungskopierern auf Einzelanfrage hergestellt.

Die in dieser Forschungsarbeit enthaltenen Darstellungen und Empfehlungen geben die fachlichen Auffassungen der Verfasser wieder. Diese werden hier unverändert wiedergegeben, sie geben nicht unbedingt die Meinung des Zuwendungsgebers oder des Herausgebers wieder.

Die Originalmanuskripte wurden reprotechnisch, jedoch nicht inhaltlich überarbeitet. Die Druckqualität hängt von der reprotechnischen Eignung des Originalmanuskriptes ab, das uns vom Autor bzw. von der Forschungsstelle zur Verfügung gestellt wurde.

Report WP1-RWTH

Objectives and basics of linear and nonlinear calculation methods

Improved seismic design concepts for masonry buildings in Germany

(Verbesserte seismische Nachweiskonzepte für Mauerwerksbauten in Deutschland)

Project duration:	01.05.2018 – 31.12.2018
Processing:	Prof. Dr.-Ing. Christoph Butenweg M.Sc. Thomas Kubalski Dr.-Ing. Julia Rosin Lehrstuhl für Baustatik und Baudynamik (LBB) RWTH Aachen University Mies-van-der-Rohe-Str. 1 52074 Aachen Tel.: +49-241-80 25088 Fax: +49-241-80 22303
Date:	13.02.2019
Project No.:	P 52-5-3.117-1486/16
Revision:	R-1

This project is financed by Deutsches Institut für Bautechnik

INDEX

1 INTRODUCTION 1
1.1 Project part I (DGfM) 1
1.2 Project part II (DIBt) 3
2 BASICS FOR LINEAR CALCULATION AND DESIGN 1
2.1 General design approach 1
2.2 Modelling approach 1
2.3 Lateral force method of analysis 2
2.3.1 Total base shear 2
2.3.2 Combination of the effects of seismic actions 2
2.3.3 Torsional effects 3
2.4 Seismic design situation 4
2.5 Verification procedure according to DIN EN 1996-1-1/NA 5
2.5.1 Combined vertical and horizontal loading at the base and top of the wall (BL) 5
2.5.2 Combined vertical and horizontal loading in the middle of the wall (BL) 6
2.5.3 Shear loading (SS, SZ) 6
2.5.4 Decisive wall sections for verifications (SS, SZ, BL) 7
3 VERIFICATION BASED ON NONLINEAR STATIC ANALYSIS 8
3.1.1 Modelling assumptions and input data 8
3.1.2 Pushover curve 8
3.1.3 Wall capacity curves 9
3.1.4 Failure modes 11
3.1.5 Deformation limits 12
3.1.6 Moment distribution factor α 13
3.2 Transformation of the pushover curve 14
3.3 Safety verification using damped spectra 14
3.4 Safety verification using inelastic spectra 17
4 DIN EN 1998-1/NA: NONLINEAR STATIC PUSHOVER ANALYSIS 19
5 DAMAGE STATES 22
6 REFERENCES 24
6.1 Codes and Guidelines 24
6.2 Reports and literature 24
6.3 Software 26

INDEX

1 INTRODUCTION 1
2 SAMPLE BUILDINGS 2
3 BEHAVIOUR AND OVERSTRENGTH FACTORS IN THE CODES 4
3.1 DIN EN 1998-1 (2010) and DIN EN 1998-1/NA (2011) 4
3.1.1 General part 4
3.1.2 Material related parts 5
3.1.2.1 Reinforced concrete structures 5
3.1.2.2 Steel structures 5
3.1.2.3 Timber structures 6
3.1.2.4 Composite structures 6
3.1.2.5 Unreinforced masonry structures 6
3.2 Draft of DIN EN 1998-1 (2018) 6
3.3 Summary: DIN EN 1998-1 (2018), DIN EN 1998-1 (2010), DIN EN 1998-1/NA (2011) 7
3.4 Behaviour factors for unreinforced masonry structures in international codes 8
4 PROCEDURE TO DERIVE BEHAVIOUR FACTORS FOR URM 10
4.1 Behaviour factor q_R accounting for load redistribution 10
4.2 Behaviour factor q_D accounting for deformation capacity and energy dissipation 11
4.3 Behaviour factor q_S accounting for all other sources of overstrength 12
5 LINEAR AND NONLINEAR CALCULATIONS 13
5.1 Design response spectrum 13
5.2 Basic assumptions of the calculations 14
5.2.1 General assumptions 14
5.2.2 Assumptions for linear elastic analysis and design 15
5.2.3 Assumptions for nonlinear pushover analysis and verification 15
6 LINEAR AND NONLINEAR VERIFICATION RESULTS 16
6.1 Linear analyses 16
6.2 Nonlinear static analyses 17
6.3 Summary of linear and nonlinear verifications 18
6.3.1 Linear verification results 18
6.3.2 Nonlinear verification results 18
6.3.3 Comparison of linear and nonlinear verification results 18
7 DERIVATION OF BEHAVIOUR FACTORS WITH PUSHOVER ANALYSIS 21
7.1 Behaviour factor q_R accounting for load redistribution 21

7.2 Behaviour factor q_D accounting for deformation capacity and energy dissipation 24
7.3 Behaviour factor q_S accounting for all other sources of overstrength 27
8 BEHAVIOUR FACTORS FOR MASONRY BUILDINGS IN GERMANY 28
9 APPLICATION TO THE BUILDINGS OF THE PARAMETRIC STUDY 30
9.1 Terraced houses 30
9.2 Single-family and multi-family houses 30
9.3 Comparison of linear and nonlinear calculation results 30
10 APPLICATION TO THE EMILIA ROMAGNA BUILDINGS 32
10.1 Building Po1 32
10.2 Building Pr3 32
11 COMPARISON OF ALL CALCULATION APPROACHES 33
12 SUMMARY AND RECOMMENDATIONS 39
13 REFERENCES 41

Annex 1: Results of linear calculations
Annex 2: Results of non-linear static analyses
